But if one persists, they will have the Cadillac of neighborhood kid's downhill racers. Some of the metal assembly will have to be farmed out to a shop, unless yours is well equipped. The project is for the advanced amateur builder.0 of 0 people found the following review helpful. Five StarsBy David LawrenceHaven't built the car yet but plan on doing it.0 of 0 people found the following review helpful. Great family projectBy Adam BrickellI first read this book in 1978 when I was third grade. I checked it out from the school library and continued to renew it each week. My teacher noticed my enthusiasm for it and suggested that my parents buy a copy of the book. The book was purchased and, alas, the car was never built. I held on to the book through many moves thinking that I would some day build the car with my own children. My oldest son is now in third grade and we are in the process of purchasing the materials for the car and starting the build. My dad, now retired with plenty of time on his hands, will be helping out as well. He just completed a frame-up restoration of a 1954 MG. We didn't remember that the Buffy-Porson was based on an MG until a few years ago when we got the book out of a box of keepsakes. I love how the text of the book makes the kid the one in charge and the adult becomes

a helper. This will be a fun project for three generations of car enthusiasts.
